About This Software

You've tested your PC's gaming performance with 3DMark so what's next? Benchmark total system performance with PCMark 8, the complete benchmark for Windows. PCMark 8 includes five benchmark tests. Choose one that best matches your needs, or run all five for a complete picture of your PC's performance.

PCMark 8 also includes battery life tests and new benchmarks using popular applications from Adobe and Microsoft. Each of the five benchmarks included in PCMark 8 produces a score you can use to compare systems. Or use the detailed results from each workload to gain a deeper understanding of system performance.

- The industry standard PC benchmark test for Windows 8 and Windows 7.
- Combines performance testing with battery life measurement tools.
- Includes tests using popular applications from Microsoft and Adobe.
- Ideal for testing the performance of SSDs and hybrid storage devices.

Five benchmark tests

English

Although parasitism can be harmful, it does not necessarily be beneficial or more than half important ecological processes in ecosystems would fail if parasites were removed. Parasites affect reproduction, dimorphic traits. Parasite transfer of genetic material is significant, occasionally changing that would otherwise take even longer.

Photuris sirenis

Photuris sirenis is a disputed species of firefly, of the genus Photuris and the family Lampyridae. The only evidence of the existence of this species is the collection of field notes and illustrations contained within Benjamin Bodley's *Unusual Accounts of Lampyridae Predation in the Amazon* published in 1897.

Family:	Lampyridae
Subfamily:	Photurinae
Genus:	Photuris
Species:	P. sirenis

Bodley describes *P. sirenis* as a somewhat flattened beetle approximately two centimetres in length. Its primary colour is black; however, there is a large red square patch on the thorax. The terminal segments of its abdomen are white-yellow and glow when the insect manifests its bioluminescence.

The species is carnivorous, and like the other "femme fatale" species in the *Photuris* genus, the females are able to mimic the light signals of other firefly species' males, to attract, kill, and eat them.

While inter-family mimicking behaviour is known to science, Bodley's claim that *P. sirenis* can also use its flashing bioluminescent signals to attract and kill mammals and other megafauna, including humans, is seen as highly unlikely.

DON'T BE FOOLED. Upgrade link from 3D Mark Demo to upgrade to 3D Mark Advanced Edition leads you here! I knew this was a larger more comprehensive product, but the link made me believe that PC Mark 8 included 3D Mark, reinforced by an erroneous link. It DOES NOT!!!! Unless you really want to benchmark your office apps, this is NOT what you are looking for!!!!

Did not spend a lot of time with the software as it was not what I was looking for. This is definitely not the product I thought it was going to be.

. Having used 3DMARK extensively to benchmark my pc's, I thought PCMARK might be a natural progression in benchmarking software. Unfortunately, PCMARK 8 proved to be an overpriced disappointment. The software offers a very short list of benchmarks which range from somewhat useful, to downright pointless. I regret not doing more research on this product, but atleast I bought it on sale.. Those benchmarks are to long, 90min+, each. Need a day off to run standard test.

My hardware: use i7 cpu 16gb ram 3.8TB SSD and a nvidia GTX.

p.s. Steam reports that I have used PCMARK 8 for 26hours which I didn't

The same is with

I7-6800k 6 core 12 threads
64GB ram

RIP PCmark

EDIT: update. Literally only bought this for the battery life tester as it seems to be the best on the market. I'm not sure why PCMark 10 doesn't have the battery life testing anymore. I appreciate how easy it is to test any laptop's battery on various different tests such as light web browsing to video editing.. It is looking like a good tool for testing a computer's capabilities, when it comes to your everyday functions, and some more interesting stats concerning storage. Plus to test applications. Was worth the investment.

. This is quite possibly the biggest joke I have ever had to uninstall from my pc. It's a complete rip off as it attempts to dumb down every single result as if people building their own PC's aren't capable of consuming "grown up" statistics such as random seek or sequential transfer rate. Oh, no. For that, you have to purchase the "professional" version which costs 995 dollars. This has to be bar none, the largest waste of money you could possibly engage in on steam.

Even if your goal is to compare tuning in a specific arena- such as storage or gpu overclocking with the community, YOU CAN'T. You can only compare "gaming scores" or some other version of a generic conglomeration of all scores put together.

COMPLETE WASTE OF MONEY- especially if your goal is to tune specific area of your pc as this software does not grant you the insight required to do so. For example, my storage score is 5000. Ok great... that isn't helpful to me if I am attempting to tune my filesystem to large file transfers as it provides no insight into how that score was compiled.

Not recommended.. One of the best games I've played. Highly recommended. Probably the best tool to find bottlenecks in your system and then tweak it to perform well in all aspects of both gaming and office use. After you upload your results online the real fun begins. Then you can compare your exact hardware with thousands of others and both make sure it is running like it should and get ideas for how to improve performance.. It doesn't show any real metrics or stats like random read speed or files per second, it doesn't help you to find bottlenecks. It only shows abstract conglomerate scores. Totaly useless.

Really good benchmarking software!. A recent purchase which I thought was very good. I was after the bench mark for my workstation.

I simply installed it and came back after lunch. As its on steam what could be easier, simply put quick purchase, quick download followed by run the software. For a quick bench test with no complex geeky theories , it fits the bill. Not all of us want to sit at pc's for 100's of hours bench marking and swapping parts. Thumbs up from me tbh.. Nice benchmark. I love the 3 runs for the sake of accuracy.. This is, without a second thought, the worst modern performance test. The tests take WAY to long (20-40 minutes) and does not provide any useful data in the end when tweaking performance. Dont buy this\u2665\u2665\u2665\u2665\u2665\u2665. THis used to be available directly from the supplier. Now it has to come through Steam and that sucks, because Steam adds CPU overhead that takes away from the test results. Not buying this ever again while it's in Steam.

Also it just gives me a number at the end that I can't use to judge whether the results are good or bad or indifferent. It's pretty useless for me.
